crowd:it

simulate.visualize.improve
Reliable simulation of pedestrian flows

Choose the package that suits you best - for small projects, regularly simulations, or for working in teams!

Regardless of the package, you receive **all features, all evaluation options, all export functions** and a high degree of flexibility thanks to the floating license.

	lite Big impact for small projects	personal Our classic: The all-round simulation package	team The simulation package for teams	business The enterprise solution for your company
Data import	✓	✓	✓	✓
Modelling and simulation	✓	✓	✓	✓
Visualisation	✓	✓	✓	✓
Export of results	✓	✓	✓	✓
Updates & technichal support	✓	✓	✓	✓
Number of users	1	2	5	5
Number of agents	1,000	10,000	30,000	unlimited
Number of floors	3	10	30	unlimited
Individual support	-	-		10 units
Training per user	-	-		included
12-month package	€ 1.500,00	€ 4.000,00	€ 7.000,00	€ 20.000,00

All prices exclude VAT. Please see our terms and conditions: https://www.accu-rate.de/en/terms.pdf
The rental period for an annual contract will automatically be renewed, if not cancelled within the notice period.

crowd:it

Something missing in your package? No problem - add extras and personalise crowd:it.

Simulation

5 extra floors	1.000 €
5,000 agents	1.000 €
1 extra user (not possible with an Easy Event license)	2.000 €
3D video tool	free
3D video of your simulation, made by accu:rate	on demand

Training and consulting

Your office - 6 hours - not including traveling costs	2.000 €
At accu:rate or online - 4 hours - per person from 2 attendees on	400 €
Individual support (1 unit = 30 min)	100 €

Need support in your project? We will gladly help you and develop your project together with you.

Further Services

Data preparation	on demand
Modelling and simulation	on demand
Use of accu:rate's computation engines	on demand
Analysis	on demand

crowd:it

Reliable simulation of pedestrian flows

We offer four packages, which reflect various industry needs. All licenses include the following features:

Data preparation and import	CAD .dxf import and Vectorworks plugin
Modelling and simulation	Creation of simulation objects (origin, destination, etc.) with an intuitive UI Configuration of paths with click Population set-up: individual characteristics for agents Multiple way-finding heuristics Stairs, elevators, escalators Groups
Visualisation	(Batch/Single-) Screenshots 2D-videos Agent trajectories Options to display agent characterisitics Highlighting and tracking of single or multiple agents Inclusion of user logo, title and background image
Analysis of the results	Heatmaps of e.g. density, speed and agent numbers Detailed analysis of evacuation times Detailed analysis of agent paths on evacuation time Clearance time analysis and plots of the entire scenario Plots of agent-time dynamics Counting lines that evaluate the speed and number of agents crossing them Detailed area evaluations of e.g. speed and density Individual waiting times Area dwell times Object-specific evaluations (e.g. flow rates on escalators)
Data export	Export results as 2D videos, screenshots, plots and raw .csv files
